LETTER OF COMMENDATION

Dear Don,

The purpose of this letter is to formally and publicly commend you and your team for the excellent service that you have recently provided to the Indian Point Energy Center. It is a rare occasion when I write an unsolicited letter, however in this case I was so impressed by the support and service provided by Dryden Diving, that I feel compelled to do so.

I wanted to take a minute and pass along my heartiest and personal commendation for you and your crew of divers that successfully completed the radiological diving evolution culminating in successful repairs to the fuel transfer system at the Indian Point Energy Center on 18 Mar 2011.

As you well know, radiological diving evolutions are always a high stress evolution, and when coupled with extreme schedule pressure, strict foreign material controls, hastily devised work plans, elevated water temperatures, and exceptionally difficult dive conditions, as in this evolution, working conditions can rapidly become less than ideal.

However, on this particular dive, including the preparations leading up to the dive, **you** and **your team** of professional divers always exhibited great care and utmost dedication that is far beyond what could reasonably be expected.

What predominately impressed me during this evolution was not only the thoroughness and dedication exhibited by Dryden Diving employees, but for every direction given to the team by me, no matter the situation, every response I ever received was "ROGER THAT".

Such dedication to the tasks at hand, even when working extended shift hours, and the "ROGER THAT" attitude reflect great credit not only upon you, but also each and every member of your team! Such devotion demands commendation!

Please ensure that each team member receives this message.

Sincerely,

L.W. Frink, Radiation Protection Supervision, acting
